India's PE and PP Import Demand Set to Stay Firm in H1 2026

India's polyethylene (PE) and polypropylene (PP) import demand is expected to remain strong during the first half of 2026 supported by robust downstream activity and seasonal manufacturing trends in India. Downstream producers raise operating rates to prepare for peak consumption during the March-May summer season.

Flexible packaging demand, particularly for fast-moving consumer goods (FMCG), is a key driver. Food and beverage consumption rises during summer. Food manufacturing growth generally accelerates from October to March, while beverage production expands mainly between January and May. In PE, stronger demand from packaging is expected to support restocking. High-density polyethylene (HDPE) bag demand has been notably strong since early January, while low-density polyethylene (LDPE) packaging demand is anticipated to improve further. For PP used in construction and agricultural packaging, firmer first-quarter demand is supporting buying interest, aided by seasonal construction activity and the upcoming harvest.

SHORT TERM OUTLOOK – OIL TANKER MARKET

A monthly report covering the next four months including trends in oil supply, demand and trade, tanker demand and supply, spot, and time charter rates for MRs up to VLCCs, comparisons with FFAs plus the latest news on developments impacting the oil and tanker sectors.

MEDIUM TERM OUTLOOK – OIL TANKER MARKET

Concise analyses of topical issues, consistent market data series and views on future trends in tanker charter rates. The report covers Oil Prices; Economic Developments; Oil Demand and Supply; Trade; Tanker Demand, Supply and Rates. Sent to clients around January, April, July and October each year

SHORT TERM OUTLOOK – VLGC MARKET

A monthly report looking four months ahead at likely trends in the VLGC Spot Market with the latest on key LPG carrier trades, benchmark LPG prices, arbitrage developments, a comparison with FFAs and recent news

MEDIUM TERM OUTLOOK – LPG CARRIER MARKET

A quarterly series of regular reviews, analyses and forecasts of the LPG Carrier Market. The report covers Economic Developments; LPG production, consumption and pricing; LPG, chemical gases and ammonia trade, LPG Carrier Demand, Supply and Rates for Fully Ref, Semi-Ref and Pressurised Ships. Reports are sent to clients around January, April, July and October each year.

CHEMICAL CARRIER WORLD SERVICE

An annual consultancy service currently providing Clients with an Annual Fundamentals Report, a Forecast Update, two quarterly Market Monitors, Monthly Commodity Trade Bulletins for key countries, an annual presentation on the market outlook and access to RLA's consultants and analysts to discuss issues arising from these reports.
